                                                                                             The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also chought to play a role in the pathogenesis of atheroscierosis and coronary heart disease. The present sequence is a nucleic acid sequence isolated in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  420

The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the scrodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also thought to play a role in the pathogenesis of atherosclerosis and coronary heart disease. The present sequence is a nucleic acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä

The present nucleotide sequence is provided in a specification relating to compounds and methods for the treatment and diagnosis of chlamydial infection. The compounds provided include polypeptides and fusion proteins comprising immunogenic portions of Chlamydia antigens and DNA sequences encoding such polypeptides. They are useful for vaccinating against chlamydial infection, which causes pelvic

```
The present invention describes compositions comprising a Chlamydia Capil protein and methods for the diagnosis and therapy of Chlamydia infection. Chlamydia bNA and protein sequences from the present invention can have vaccines. Compounds from the present invention can be used in munor response, specifically stimulating a Chlamydia-specific T-cell an immune response, specifically stimulating a Chlamydia-specific T-cell animal. Methods from the present invention can be used for eliciting presence of Chlamydia in a patient, to stimulate and/or expand T cells specific for a Chlamydia in a patient, to stimulate and/or expand T cells infection. But the protein; and for treatment of a Chlamydia in a patient, and for treatment of a Chlamydia in the protein; and for treatment of a Chlamydia in the communication. But the present invention.
                                                                                                                                                                                                                                                                                                                                                                    the

t= "C. trachomatis L2 PMPE protein fragment #18"
"CDS does not include stop codon"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to Chlamydia sp. polymorphic membrane protein (PMP) E and PMPI and nucleic acid molecules encoding such proteins. PMPI and PMPE polypeptides, nucleic acids and vaccines are useful for preventing, treating or ameliorating trachoma, conjunctivitis, tubal occlusion, cervicitis, cervical cancer, pelvic inflammatory disease (PID). Iymphoparanioma venerum (LGV), endometritis, epididymitis, salphingitis, infertility, reactive arthritis, inflammatory heart disease, urethritis, autoimmune myocarditis, cardiomyopathy and atherosolerosis. They are also useful as reagents for clinical or medical diagnosis of Chlamydia infections. The present sequence is Chlamydia trachomatis L2 PMPE DNA fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel purified Chlamydia polymorphic membrane protein E or I, useful for preparing vaccines for preventing or treating diseases associated with Chlamydia infection such as trachoma, and infertility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ACCCCTGAAAGTGGTGGTGCGATTGGTTATGCGAGTCCCAATTCTCCTACCGTGGAGATT 360

The invention relates to isolated polynucleotide encoding at least a partial Chlamydia protein which is an antigenic fragment, or the complements, fragments, homologues and variants, and antibodies raised against the antigenic proteins (or fragments). The nucleic acids, proteins and antibodies are used to diagnose and treat Chlamydia infections (e.g. a sexually transmitted disease, pelvic inflammatory atherosclerosis and coronary heart disease) in a patient, and in the treatment of male infertility. The compounds of the invention are also useful for detecting the presence of Chlamydia in a patient, and stimulating and/or expanding T cells specific for a Chlamydia protein. The present sequence encodes a Chlamydia antigen.

                                                                                                                                                                                                                                                                                        (PMP) E and PMPI and nucleic acid molecules encoding such proteins.

PMPI and PMPE polypeptides, nucleic acids and vaccines are useful for preventing, treating or amelioating trachoma, conjunctivitis, tubal occlusion, cervicitis, cervical cancer, pelvic inflammatory disease (PID), lymphogranuloma venereum (LGV), endometritis, epididymitis, salpingitis, infertility, reactive arthritis, inflammatory heart disease, urethritis, autoimmune myocarditis, cardiomyopathy and atherosclerosis. They are also useful as reagents for clinical or medical diagnosis of chlamydia infections. The present sequence is

                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to Chlamydia sp. polymorphic membrane protein (PMP) E and PMPI and nucleic acid molecules encoding such proteins. PMPI and PMPI and nucleic acid molecules encoding such proteins. PMPI and PMPE polypeptides, nucleic acids and vaccines are useful for preventing, treating or ameliorating trachoma, conjunctivitis, tubal occlusion, cervicitis, cervical cancer, pelvic inflammatory disease (PID). Iymphoparanuloma venereum (LGV), endometritis, epididymitis, salphingitis, infertility, reactive arthritis, inflammatory heart disease, urethritis, autoimmune myocarditis, cardiomyopathy and atherosoclerosis. They are also useful as reagents for clinical or medical diagnosis of Chlamydia infections. The present sequence is Chlamydia trachomatis L2 PMPE DNA fragment.

          (PMP) E and PMPI and nucleic and molecules encoding such proteins.

PMPI and PMPE polypeptides, nucleic acids and vaccines are useful for preventing, treating or ameliorating trachoma, conjunctivitis, tubal occlusion, cervicitis, cervical cancer, pelvic inflammatory disease (PID), lymphogranuloma venereum (LGV), endometritis, epididymitis, salpingitis, infertility, reactive arthritis, inflammatory heart disease, urchritis, autoimmune myocarditis, cardiomyopathy and atherosclerosis. They are also useful as reagents for clinical or medical diagnosis of chlamydia infections. The present sequence is Chlamydia trachomatis L2 PMPE DNA fragment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to Chlamydia sp. polymorphic membrane protein (PMP) E and PMPI and nucleic acid molecules encoding such proteins. PMPI and PMPE polypeptides, nucleic acids and vaccines are useful for preventing, treating or ameliorating trachoma, conjunctivitis, tubal occlusion, cervicitis, cervical cancer, pelvic inflammatory disease (PID), lymphogranuloma venereum (LGV), endometritis, epididymitis, salpingitis, infertility, reactive arthritis, inflammatory heart disease, urethritis, autoimmune myocarditis, cardiomyopathy and atherosclerosis. They are also useful as reagents for clinical or medical diagnosis of Chlamydia infections. The present sequence is Chlamydia trachomatis L2 PMPE DNA fragment.
                                                                                                                                                                                                                                                            Novel purified Chlamydia polymorphic membrane protein E or I, useful for preparing vaccines for preventing or treating diseases associated with Chlamydia infection such as trachoma, and infertility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   121 AATACCTTATGGGGGAATATGCTGCTTGCAACAGAAAGCTTAAAAAATAGTGCAGAACTG 180

Sequence 183, Application US/09620412C

Patent No. 6448234

GENERAL INFORMATION:

APPLICANT: Steven P. Fling

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR

TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFE

FILE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFE

CURRENT APPLICATION NUBBER: US/09/620,412C

CURRENT FILING DATE: 2000-07-20

NUBBER OF SEQ ID NOS: 363

SOFTWARE: FastSEQ for Windows Version 3.0/4.0

Sequence 170.

Patent No. 6432916

Senemal INFORMATION:

APPLICANT: Probst, Peter

APPLICANT: Skeiky, Yasir

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR TREATMENT AND

TITLE OF INVENTION: DIAGMOSIS OF CHLAMYDIAL INFECTION

FILE REFERENCE: 210121.4696.877

CURRENT PILING DATE: 2000-04-19

NUMBER OF SEQ ID NOS: 305

SOFTWARE: FastSEQ for Windows Version 3.0/4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkely Drosophila Genome Project (BDGP).

The BDGF is constructing a physical map of the Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and haron Mammoser in Pieter de Jong's laboratory! in the Department of Cancer Genetics at the Roswall Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial

EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BJ390296 Dictyostelium discoideum cDNA linear EST 08-MAR-20

collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fulifly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pleter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo. NY. The library is named RPCI-98 and was constructed by partial Ecorl digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2: on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://dwapac.med.buffalo.edu/drosophila_bac.htm.
Drosophila melanogaster genome survey sequence TET3 end of BAC #BACHAN19 of RPCI-98 library from Drosophila melanogaster (fruit AL065820 AL065820 IG:4944788
